New features

This release contains no new features.

Changes in Functionality

This release contains the following functionality changes:

- During an Excel or CSV import simulation, any Match and Merge Add-on triggers are deactivated. During the simulation other triggers are still active and all triggers are active when performing the actual import.
- The following information is now included in the log when importing, exporting, and transferring:
 - Dataspace, dataset, and table names.
 - User information.
 - Service name.
 - Start, end, and ongoing percentage of upload, transfer, import and export progress.
 - IP address and HTTP Session ID.

Changes to third-party libraries

This release contains no updates to third-party libraries.

Closed Issues

This release contains the following closed issues:

- **[ADIX-3530]** Hidden fields are still available on the import mapping screen.
- **[ADIX-3531]** Import of numbers longer than 17 digits fails with Excel and CSV.
- **[ADIX-3549]** Using the convert decimal to string transformation function causes the decimal data type field to display a value incorrectly if there are more than 17 digits.
- **[ADIX-3550]** After import of Excel, CSV, and XML using an aggregate decimal transformation function, the decimal data type field displays incorrectly when the number has more than 17 digits.
- **[ADIX-3551]** An error occurs when exporting Excel using the **Convert String to decimal** transformation function.

Known Issues

This release contains the following known issues:

- Association object and selection node are not supported.
- Data lineage.
- Graphical view of the data mapping configurations.
- **Split of string** transformation function is not supported for a multi-valued string field.

- Data transfer between complex terminal nodes is possible only if they use the same Java Bean.
- You can not export data from multiple complex nodes in EBX® that when there is at least one complex node with multiple occurrences.
- You can not import data from multiple complex nodes in an XML file when there is at least one complex node with multiple occurrences.
- **Split of data** works for terminal nodes only.

SQL export

- You can only export data from EBX® to the selected columns in the same tables of a view which is joined by multiple tables.
- The add-on doesn't support exporting SQL with the **Replace all content** mode to a view which is joined by multiple tables.
- Checking mandatory fields of a view in SQL database is not supported.
- The export still executes normally and shows an error message from database when no privilege granted.
- Exporting data from multi-valued fields and multi-valued groups is not supported.
- You can not export data from EBX® to a view in PostgreSQL database.
- Exporting data from EBX® to an auto-increment column in SQL Server is not supported because the **IDENTITY_INSERT** property is always set to OFF.

SQL import

- Checking privileges for a view in PostgreSQL is not supported.

Dynamic Data Modeling

- Foreign key statements in the DDL file are not managed.
