New features

This release contains the following new features:

- A new Drive configuration property allows administrators to choose whether to allow upload of duplicate assets to the given Drive.
- A new connector type allows a Drive location to be set to an Amazon S3 bucket. This allows you to attach assets to fields in EBX® while managing their storage outside of EBX®.
- Actions such as deletion, deactivation, downloading, and sharing can now be performed on multiple assets at once.
- When configured by an administrator, users now have the option of uploading and attaching assets directly from the tabular view. This prevents having to open each record to attach assets.
- The **Digital asset** table now displays a thumbnail of each digital asset.
- When uploading files, any files that have errors can now be removed before uploading.
- A new API is available that allows you to create a custom connector to link a field containing assets with a third-party tool.

Attention

As the add-on is undergoing revision, the documentation's images and descriptions of some components might not exactly match the current UI.

Changes in Functionality

This release includes the following changes to functionality:

- The **Class** field is now hidden in the **Pattern** table.
- Two files with the same name can now be uploaded to a Drive. The add-on automatically appends a number increment to the file name.
- The `File not found` error no longer displays when all assets are removed from a Drive.
- When you delete a D.A.C, any asset modifications made in the local dataspace (that are related to the deleted D.A.C) are lost. Assets are reset to their initial state.

Changes to third-party libraries

This release contains no updates to third-party libraries.

Closed Issues

This release contains the following closed issues:

- *[EBXDAMA-591]* An error message displays when opening a record that has an existing asset in the blacklisted extension.
- *[EBXDAMA-730]* Error message should be shown as pop-up when deleting asset in Digital asset version table that does not have another version.

- [EBXDAMA-761] Create new record submission is NOT prevented when there are errors in the **Pattern** table.
- [EBXDAMA-774] In the **Upload** screen, the information related to the maximum allowed file size and restricted file upload are not displayed even though they are set up in the Drive/ DAC.
- [EBXDAMA-795] The order of assets is changed after selecting another Drive.
- [EBXDAMA-824] The original file name is changed when a user downloads an external asset.
- [EBXDAMA-833] An incorrect error message is shown when a user tries to preview an asset from a deleted Drive.
- [EBXDAMA-835] Can Input the letter or special character in the search page in the **Manage digital asset** screen.
- [EBXDAMA-844] XLS and XLSX files don't display correctly when changing the asset's zoom level.
- [EBXDAMA-875] Assets displayed in the **Drive** view don't display according to the [Mosaic] view set in the D.A.C.
- [EBXDAMA-878] The display of the tag value is incorrect.
- [EBXDAMA-885] Unable to change Drive of existing asset via the **Digital asset** table in the **Administration** panel.
- [EBXDAMA-893] An unexpected error message displays when leaving fields blank in the image configuration screen.
- [EBXDAMA-906] The dropdown menu displays incorrectly when a Drive name is too long.
- [EBXDAMA-912] The wrong screen is displayed when closing the **Edit digital asset** screen of sharing assets.
- [EBXDAMA-917] SVG images do not display correctly.
- [EBXDAMA-927] The error message is missing the rule pattern and it is not translated into French.
- [EBXDAMA-945] The **Accept duplicate(s)** checkbox does not display when uploading existing assets.
- [EBXDAMA-952] BMP images cannot be previewed even when smaller than 5MB.
- [EBXDAMA-1397][Rest API] The `getAssetInformation` endpoint returns the incorrect calculated URL for `preview_url`, `defaultIcon`, `versions.URL` and `versions.preview_url`.

Known Issues

This release contains the following known issues:

- Searching for assets in the media-type field using quick search is not supported. However, when previewing some file types, such as PDFs, you can search for text within the file.
- The configuration is not updated for the supported file extensions after users access the Digital Asset Manager widget.
- Document previews cannot display Vietnamese text.
- When accessing assets in an external Drive, error messages may display when selecting all assets. This can be the result of access limitations put in place by the third-party tool.
- Thumbnails of some uploaded SVG files do not display correctly.

- Previews of PPT, PPTX, DOC and DOCX files cannot display charts due to a limitation of the library used to generate the preview.
