New features

This release contains the following new features:

- You can now import from and export to SQL databases. An administrator must configure the connection to the database and connection between the database and data model. See the *User Guide* for more information.
- The cross-reference transformation function contains the new **Ignore lookup failure** option. When enabled, records are imported and exported even when the cross-reference lookup does not find a corresponding value. If left disabled, records these records are not imported.

Changes in Functionality

This release includes the following changes in functionality:

- Behavior during import at the table level was updated to ensure consistency when importing an empty file.
- Templates are now available for use on tables from the same data model, regardless of their location.

Changes to third-party libraries

This release contains no changes to third-party libraries.

Closed Issues

This release contains no closed issues.

Known Issues

This release contains the following known issues:

- Importing and exporting SQL: Read and write is not possible with the Timestamp data type with MS SQL Server.
- Configuring a schema using the JNDI configuration in your web server is not supported.
