New features

This release contains the following new features:

- A built-in connector is available for Microsoft Azure.
- An option is available to move assets from one Drive to another.
- User Experience enhancements:
 - Permission options renamed for clarity.
 - When removing assets from an upload, the confirmation dialog no longer displays each time an asset is removed.
 - Tabular view: pagination via next and previous actions is available when multiple assets are attached to a record.
 - When viewing an asset preview, the ESC key is a shortcut to closing the preview.
 - When viewing assets shared via a permalink or email, the attach icon, detach icon, and attachments pane are hidden.
- Asset previews are available by clicking the asset's thumbnail in the tabular view. Additionally, assets can be downloaded from the tabular view.
- Permission updates:
 - Two new permission options are available on Drive and D.A.C configurations: **Delete other user's assets** and **Edit other user's assets**.
 - The behavior of the **View other user's assets** permission was updated so that users with this permission have read-only access to other user's assets. They cannot edit or delete them.
 - When the **Quick upload and attach** permission is enabled, it applies when uploading from the tabular view.
- The **Reject duplicates** setting is applied when:
 - Users upload assets from the record's details view (with quick upload and attach permission), or the tabular view.
 - Administrators upload an asset from the **Administration** panel, move an asset to another Drive, or upload a ZIP file.
- The ability to upload assets from the tabular view is manageable using the **Display the upload button** in the D.A.C configuration.
- When configuring an S3 connection, the folder is selectable from a list of existing folders. Alternatively, the option is available to create a new folder.
- When configuring an S3 connection, the bucket name is checked for valid input.
- There is an option to delete asset versions from the **Version management** tab when accessing from the **Administration** panel.
- REST API Updates:
 - The REST API was refactored.

- The `getInfo` endpoint was updated to include a list of all versions of an asset.

Attention

As the add-on is undergoing revision, the documentation's images and descriptions of some components might not exactly match the current UI.

Changes in Functionality

This release includes no changes to functionality.

Changes to third-party libraries

This release contains no changes to third-party libraries.

Closed Issues

This release contains the following closed issues:

- **[EBXDAMA-929]** If the server is not reloaded, deactivated assets can still be attached.
- **[EBXDAMA-947]** The **Actions** menu does not display correctly.
- **[EBXDAMA-953]** Files from an external Drive cannot be previewed in the **Edit digital asset** screen.

Known Issues

This release contains the following known issues:

- Searching for assets in the media-type field using quick search is not supported. However, when previewing some file types, such as PDFs, you can search for text within the file.
- The configuration is not updated for the supported file extensions after users access the Digital Asset Manager widget.
- Document previews cannot display Vietnamese text.
- When accessing assets in an external Drive, error messages may display when selecting all assets. This can be the result of access limitations put in place by the third-party tool.
- Thumbnails of some uploaded SVG files do not display correctly.
- Previews of PPT, PPTX, DOC and DOCX files cannot display charts due to a limitation of the library used to generate the preview.
