New features

This release contains the following API updates:

- The Java API's `DigitalAsset` and `DigitalAssetVersion` classes now include `getSize()` to retrieve an image's size.
- The responses from the following REST API endpoints now include the size property with width and height properties when the asset type is an image:
 - `:search`
 - `:getInfo`
 - `:getAttachment`
 - `:upload`
- An option was added to Drive configurations that disables automatic synchronization between the add-on and an external Drive. When this option is disabled, it can improve performance, and you can synchronize manually as needed when viewing the Drive.

Changes in Functionality

This release includes no changes to functionality.

Changes to third-party libraries

The following third-party libraries were updated:

- The Apache Commons FileUpload library was updated to version 1.5.
- YAML 1.1 parser and emitter for Java library was updated to version 2.0.
- Guava: Google Core Libraries For Java to version 31.1-jre.

Closed Issues

This release contains the following closed issues:

- **[EBXDAMA-2263]** The wrong error message is displayed in the **Manage digital asset** screen when the **Region** and **Bucket** name do not match.
- **[EBXDAMA-2264]** The prefix [ON] incorrectly displays with the Icon Drive when creating a new version.
- **[EBXDAMA-2266]** An unexpected error pop-up displays when uploading invalid files in the tabular view.
- **[EBXDAMA-2267]** The display is incorrect when registering a connector but not changing the S3 information of a Custom Drive.
- **[EBXDAMA-2269]** Wrong with deleted assets from Custom connector when we haven't reloaded the drive

Known Issues

This release contains the following known issues:

- Searching for assets in the media-type field using quick search is not supported. However, when previewing some file types, such as PDFs, you can search for text within the file.
- The configuration is not updated for the supported file extensions after users access the Digital Asset Manager widget.
- Document previews cannot display Vietnamese text.
- When accessing assets in an external Drive, error messages may display when selecting all assets. This can be the result of access limitations put in place by the third-party tool.
- Thumbnails of some uploaded SVG files do not display correctly.
- Previews of PPT, PPTX, DOC and DOCX files cannot display charts due to a limitation of the library used to generate the preview.
