Closed Issues

This release includes the following closed issues:

- **[MAME-8622]** Hidden field values are not updated after the merge process finishes.
- **[MAME-8623]** An inconsistent matching result is shown in the diagram when evaluating matching results.
- **[MAME-8624]** The record order in when managing a group in the **Consolidated view** is incorrect.
- **[MAME-8626]** Incorrect matching results are returned when using light relationships (FK from matching table to target table OR over a link table).
- **[MAME-8628]** The **State** is duplicated in the **Identified as false positives** tab.
- **[MAME-8629]** The back button does not work as expected after completing a merge.
- **[MAME-8630]** Some text is not translated into French.
- **[MAME-8632]** A false positive relationship is not created after merging records in the inline screen.
- **[MAME-8634]** [UI] When hovering over the **False positive** icon in the **Manage group** screen, the cursor displays as a hand.
- **[MAME-8635]** Records are not sorted correctly when accessing the **Merge** view when managing a group.
- **[MAME-8636]** The warning banner does not display when accessing a group that includes at least one hidden record.
- **[MAME-8637]** The matching field is changed when duplicating a matching policy.
- **[MAME-8638]** [BO] There is no new golden record but the **Apply merge policy** button is still enabled.
- **[MAME-8640]** When managing relationships during a manual merge, it takes a long time to display records.
- **[MAME-8646]** An incorrect error message displays when manually merging and the main table's primary key is not auto-incremented.

- **[MAME-8670]** All add-on services still display in the **Actions** menu after pausing the corresponding matching configuration.
- **[MAME-8678]** Matching cannot be evaluated for selected records when using a matching policy without having a merge policy defined in the related table.
- **[MAME-8884]** Unexpected information is included in the log file.
- **[MAME-8891]** An error displays after unmerging an auto-created golden record that had been merged multiple times.
- **[MAME-8894]** The login page displays when executing any action in the **Actions** menu in the **Manage group** screen after accessing the group from a workflow.
- **[MAME-8920]** The decision tree result is inconsistent when evaluating matching for a URI field through a relationship.
- **[MAME-8932]** An error occurs when running manual merge if the primary key is a String and includes an apostrophe in the data value.
- **[MAME-8936]** An error displays when applying sort criteria for false positive records or when viewing records in the **Manage group** screen.

Known Issues

This release contains the following known issues:

- A field configured for use in matching operations cannot be configured for other relationships. For example, in a Person table the Address field is configured through matching by foreign key. This field cannot be configured in another instance with a different relationship (over linked table, or none).
- **[MAME-7434]** Linked records are duplicated in the link table when one of the foreign keys is not part of the primary key.
- When matching using the foreign key option, you can only specify a single hop foreign key. In other words, it cannot be a foreign key to a foreign key.
- The **Validation** service in the **Consolidated** view runs as expected when first executed, but slow on subsequent executions.
- In order to accurately track record lineage, table history must remain activated over time. If the table's activation status repeatedly changes, the lineage data will be inconsistent.
- Severe errors occur when multiple datasets based on the same model exist and a table from one of these datasets is activated in an add-on matching configuration. As a workaround, you can create another data model publication using the **Manage publications** service in the Data Model Assistant. After creating a dataset for the new publication, you can follow the normal procedures to configure a matching policy for tables in the new dataset.
- For foreign key alignment, the FKs that are multi-value fields cannot be aligned (either manually or automatically).
