New features

This release contains no changes in new features.

Changes in Functionality

This release contains no changes in functionality.

Changes to third-party libraries

This release contains no changes to third-party libraries.

Closed Issues

This release contains the following closed issues:

- **[DINT-3892]** A popup confirming the template change displays even though the template's mappings are not impacted.
- **[DINT-4248]** A scheduled workflow job fails due to database connection issues.
- **[DINT-4269]** A template cannot be saved after changing and publishing the data model.
- **[DINT-4306]** File names that include Chinese characters do not display correctly in exported CSV and Excel files.
- **[DINT-4322]** No file is download when exporting to CSV and the file name includes Japanese characters.
- **[DINT-4323]** When exporting related data, the export includes data from other dataspace when only a specific dataspace is referenced.

Known Issues

This release contains the following known issues:

- A JNDI data source cannot be configured when EBX is deployed on a WebLogic, or JBoss server.
- When exporting to SQL with TDV, if any error occurs, the operation is cancelled.
- Due to a limitation in Excel, long fields with the number data type display all numbers past the 16th place as a 0.
- Importing and exporting SQL: Read and write is not possible with the Timestamp data type with MS SQL Server.
- Configuring a schema using the JNDI configuration in your web server is not supported.
- When creating a custom transformation function, you must use a predefined data type for its input and output fields.
