

TIBCO EBX® Data Exchange Add-on (New) Release Notes

Version 6.1.5
July 2025

Table of contents

New features.....5

Changes in Functionality..... 5

Changes to third-party libraries..... 5

Closed Issues.....5

Known Issues..... 5

New features

The Javadoc was updated to include a sample showing how to use the API to register a custom transformation and make it available to select in the UI.

Changes in Functionality

This release contains no functionality changes.

Changes to third-party libraries

Updated Apache POI and related libraries (poi, poi-ooxml) to version 5.4.1.

Closed Issues

[DINT-5459] An error can occur in the cross reference transformation function.

Known Issues

This release contains the following known issues:

- **[DINT-4339]** A JNDI data source cannot be configured when EBX® is deployed on a WebLogic, or JBoss server.
- **[DINT-5463]** The mapping UI becomes unresponsive after adding a transformation function when using the Chrome v137 browser. As a workaround try one of the following:
 - Use an alternative browser (Firefox or Edge).
 - Use an earlier version of Chrome (passed testing on v133).
 - Use an Incognito window.
- Fonts are no longer shipped with the JDK 11. Font rendering in Java 11 JVMs now uses pre-installed operating system fonts. This can cause issues in Linux environments when exporting Excel files. As a workaround, you can install the fontconfig package.
- When exporting to SQL with TDV, if any error occurs, the operation is cancelled.
- Due to a limitation in Excel, long fields with the number data type display all numbers past the 16th place as a 0.
- Importing and exporting SQL: Read and write is not possible with the Timestamp data type with MS SQL Server.
- Configuring a schema using the JNDI configuration in your web server is not supported.
- When creating a custom transformation function, you must use a predefined data type for its input and output fields.
